A lot of the same info as in the other books in the series, and also I've just discovered that I have a deep bias for land mammals and plants over other creatures

Having worked in BC I know when people go salmon crazy Since Ian is Canadian his descriptions of the First Nation wouldn't agree with those who live in Alaska Can you buy an Eskimo Pie in Canada

I really liked this book It had AMAZING photography throughout the book which really added to the book Fun little facts on each page Also the information was very informative and interesting about all the animals like dolphins sea stars there was a couple sentences about why there actually not even fish I also noticed how they really focused on the smaller with a few exceptions of course animals like plankton and why such small animals have such a huge impact on the food web not just the big animals like whales and seals Also what we can do to make sure these species can live long into the future The sub title is pretty self explanatory exploring the marine life of the pacific paradise The only thing I would change is maybe add a glossary Overall I would HIGHLY recommend this book to people of all ages.
